Definition
Assessment of student learning is the systematic gathering of information about student learning and the factors that affect learning, undertaken with the resources, time, and expertise available, for the purpose of improving the learning.

The Three Basic Steps of Assessment
1. Articulate learning goals/objectives/outcomes (don't sweat the terminology)
   “When students complete this [course, major, gen-ed program] we want them to be able to…” Include your highest goals.
2. Gather information about how well students are achieving the goals and why. Do not narrowly interpret "measureable" goals.
3. Use the information for improvement

The End of Assessment is Action: The purpose of assessment is informed decision-making, including the use of information about student learning.

Components of a Report to Accreditors on Academic Assessment
- A website on which each program has a 2-page description of its assessment system (NEASC requires its own form: E.1.A or E.1.B.). Programs accredited by other external agencies that require assessment of learning can simply say who their accreditor is, date of last visit, what the accreditor said, and what the program is doing. In the text of your self-study, analyze these honestly, focusing on those not otherwise accredited.
- A sensible system of gen-ed assessment that includes assessment of individual gen-ed courses and a way of answering the question, "What have students learning when they complete all their gen-ed requirements?"
- An overall system of institution-wide assessment that uses assessment data to close the loop, informing action at every level: classroom, program, department, college/school, and institution
- Clear-eyed analysis of all this, including sections on challenges and future plans. Not excuses, not a history of how you have made progress through incredible difficulties, and not a PR piece.
- Tip: 1-2 years ahead of the due date for the self-study, write a "dummy draft" in present tense of what you hope to be able to say in your self-study. Then plan backwards, generating action plans and a timeline for making it happen.
- Tip: Be honest with faculty and staff about accreditation requirements. Do not pretend that accreditation is not the driving force here. Instead, challenge the institution to realize significant benefits from the required assessment and to conduct assessment according to appropriate values.
- Tip: Read the accreditors' suggestions from your last re-accreditation visit; you will be asked to address them this time.
Institution-wide System for Using Assessment Information

Begin reading at the bottom; thin, numbered arrows show pathways for data to flow into decision-making; fat arrows show how the loop is closed as action, resources, and policy decisions flow back into student learning.

Decision-makers: Administrators, faculty committees

Digestion: the “stomach.” Some combination of the committees and directors of assessment/gen-ed/curriculum, institutional research, perhaps teaching center, and central administrators work together to:

- Monitor the effectiveness of the assessment system
- Aggregate and interpret data from multiple sources and make recommendations

Dept., gen-ed group

Instructor

Data: Student work

Data: Standardized tests

Data: IR: surveys, retention, etc.

Data from academic support & student affairs

The Basic, No-Frills General-Education Assessment System

1. Gen-ed goals/outcomes ("Students will be able to..." at level of course, area, gen-ed total)
2. Student classroom work (you do not need all of these):
   a. Student work from a random sample of gen-ed courses at one point in time, rubric-scored by faculty
   b. Student work from key gen-ed courses (e.g. composition, math, learning communities) or from areas of gen-ed (e.g. all writing-intensive courses, all lab sciences), rubric-scored by faculty in that course
   c. Portfolios: samples of students’ work over time, rubric-scored by faculty
   d. Senior student work in capstones, evaluated for gen-ed outcomes (e.g. writing, critical thinking) in those disciplinary contexts, as reported by departments
3. Students’ evaluation of their learning and the factors that affect their learning (you do not need all of these)
   a. Survey administered in gen-ed classes
   b. Focus groups or interviews
   c. National survey administered to all (or a sample of) students, e.g. NSSE
4. A meaningful forum in which to discuss findings and identify actions
   a. Departments offering gen-ed courses
   b. Gen-ed groups, e.g. learning communities, or writing-intensive courses
   c. Gen-Ed Committee or other relevant faculty committees
5. A meaningful way of integrating information about student learning into decision-making and budgeting at all levels (see diagram of institution-wide assessment system)
## Choices for Rubrics

### Where is the rubric constructed?

<table>
<thead>
<tr>
<th>National (e.g. VALUE Rubrics)</th>
<th>Institution</th>
<th>Department/program</th>
<th>Instructor</th>
</tr>
</thead>
</table>

### How broadly applicable is the rubric?

<table>
<thead>
<tr>
<th>Multiple types of writing</th>
<th>Similar types of writing</th>
<th>Assignment-specific</th>
</tr>
</thead>
</table>

### Applied to what writing task?

<table>
<thead>
<tr>
<th>External Prompt</th>
<th>Common assignment within General-Education or Dept</th>
<th>Instructor’s Own Assignment</th>
</tr>
</thead>
</table>

### Who scores the work?

<table>
<thead>
<tr>
<th>Team of scorers trained and normed</th>
<th>Committee or department</th>
<th>Instructor</th>
</tr>
</thead>
</table>

- Greatest chance for inter-rater reliability and comparability of rubric scores across courses, departments, institutions
- Greatest “fit” between the measure and what your faculty are teaching. Greatest chance of faculty engagement.
How to Collaborate with Students

- Surveys, interviews, focus groups. Separate from evaluation of instructor.
- Students on committee
- Enlist students as partners in the enterprise

What Gets Passed On?

- Rubric scores? Do you need institution-wide aggregation of rubric scores?
- Or a report of what the rubric scores showed, and what actions are being taken and recommended?
- Principle: Send forward only that data/information needed for decisions at the next level.

Four Models for Assessing Classroom Work in Gen-Ed (see diagram, p. 3)

**Model 1: Departments Assess their Gen-Ed Courses**

- Raymond Walters College (2 year) of the University of Cincinnati

  Each program/department holds an end-of-year meeting in which faculty each present one assignment that assesses “critical thinking” in that discipline/class, a rubric the faculty member has composed, rubric scores the faculty member has assigned, and actions the instructor is taking or plans to take. Departments/programs identify actions to take at the program/department level. Reports of the department meetings, using a common template, are submitted to the Academic Assessment Committee, which makes recommendations to the Chief Academic Officer about common needs and institution-wide actions. All record-keeping is done in Word. Walvoord, Bardes, and Denton in Banta, ed, 2007.

- University of Nebraska at Lincoln

  Departments are responsible for gathering samples of student work in their gen-ed courses (called “ACE” courses) and using the information for improvement. Departments must demonstrate that they are doing this, both when a course is first approved, and at intervals thereafter. http://ace.unl.edu/assessmentplanning.shtml

**Model 2: Instructors Discuss in Groups**

- University of Cincinnati

**Model 3: Instructors Submit Scores/Reports**

- Prince George’s Community College
A special software system allows faculty to enter scores and grades on common rubrics that faculty have composed and that are used both for grading and for assessment. Faculty teaching the same course create one or more common key assignments and rubrics. Each faculty member uses the rubric to enter scores into the database. Each cell of the rubric is assigned a point value, so the same rubric can be used to calculate the student’s grade. In the software program, each row of the rubric is connected to a course outcome, which is connected to program and gen-ed outcomes. Thus rubric scores can be aggregated to provide scores for each outcome.

- North Carolina State University

Use of commercially-available standardized tests of critical thinking were unsatisfactory to faculty and results were not used. So a system was launched in which faculty teaching gen-ed courses report to the Office of Assessment how they have assessed student work that addresses common gen-ed goals, and how they have used assessment information for changes in their own classes. Faculty teaching multiple-section courses are expected to collaborate in setting outcomes and assessment methods. In some cases, especially courses taught by grad students, the course director organizes this work. Reports from faculty can be aggregated to determine, for example, what goals faculty find most difficult for students, and what faculty are working on. In addition, the Office of Assessment conducts a few more focused studies: for example, it collects common exam questions in gen-ed math courses and tabulates the overall data to determine how well students have achieved the math gen-ed outcomes. Another focused study: the first year writing program uses a common rubric to evaluate a sample of first-year student writing. DuPont in Bresciani, ed., 2007

- St. Olaf College

An example of mission-driven, meaningful, manageable assessment is that of the general education (GE) requirements at St. Olaf. Faculty teaching a GE course over the past academic year were asked to assess one GE outcome for one GE requirement in one course. As stated on the institutional website, “The assessment approach is completely organic, relying on work students are already doing to complete course requirements. Instructors do not have to invent any surveys, rubrics, or other assessment instruments; instead, they will simply record how well students demonstrate the outcome of interest in whatever assignments the instructor believes are most germane to that outcome. Instructors will be asked to describe and reflect on their students’ work in a brief General Education Student Learning Report, designed to be completed as soon as the instructor has graded the work.” The reports prepared by individual instructors will be aggregated by requirement, so a composite picture of learning in the GE curriculum as a whole will emerge from the course-level data. http://learningoutcomesassessment.org/CaseStudiesInstitutions.html
Composite of Models 1 and 3, Using Gen-Ed Area Committees

- A “Medium-sized public university”

The administration of the process is fairly simple. Every year, the Council identifies courses to be evaluated within each of the general education categories. Instructors for each course identified are sent letters that request submission of a packet containing a syllabus, course-embedded assessment data entered into a standard reporting form (see Appendix for examples), rubrics, sample work examined, and reflections on the data analysis results. The tables, consisting of raw data of numbers of students who “exceeded,” “met,” and “did not meet” outcomes, are then submitted to the appropriate General Education Area Committee. For the general education skills categories of composition and mathematics, a fourth category of “in progress” was added to present information of student progress towards “meeting expectations.” The Area Committees next review the materials and present their recommendations to the Council. Then, Department Chairs are informed of which courses continue to meet or no longer meet the general education criteria. (Pp. 142-143). Extensive faculty development supported this effort.

Www.learningoutcomesassessment.org/publications.html.

Model 4: Scoring Team

- Community College of Baltimore County.

The Community College of Baltimore County (CCBC) uses Common Graded Assignments (CGAs) to assess general education learning outcomes. Discipline teams known as GREATs (General Education Assessment Teams) design assignments approved by faculty that are incorporated into all sections of designated courses each semester. Detailed assignments require students to demonstrate their learning in a variety of ways, e.g., writing, graphic, and oral presentations; and/or creating a website. A random sample of students’ work is then graded by trained scorers according to an accompanying rubric. p. 8.

Learningoutcomesassessment.org/documents/CommunityCollege.pdf.

- Keene State College
Faculty identify one assignment that can be used to assess each of the common outcomes for the “Integrative Studies Program.” Students are required to submit work in Blackboard. Common rubrics for each outcome are created by faculty teams and shared with instructors whose student work is being analyzed. A random sample of the work is graded by 3-person faculty teams who are trained and normed. Scores and recommendations from the scoring teams are shared across the campus.

**General Education Assessment Report Format**

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>Source of Outcome</th>
<th>How is Student Achievement of this Outcome Measured? (Assessment Strategy)</th>

<tr>
<td>2.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. Complete the table above by providing the following:
   a. The student learning outcomes being assessed within your general education course.
   b. The source of this learning outcome - core competency (provided on the following page for your reference), Transfer Assurance Guide (TAG), Statewide Transfer Module, degree program requirement, or other. If other please provide a brief description.
   c. The assignment(s) or performance observation(s) that will be used to address the corresponding student learning outcome. These assignments or performance observations should be common to each section of the general education course.

2. Answer the following questions:
   a. Use the assessment results to identify the strengths of your students.
   b. Use the assessment results to identify the weaknesses of your students.
   c. Based on your results, what action(s) will the department take in the next academic year?
d. If your department reported information from question 2c last year, summarize how your department addressed the action item(s) from the previous year. What were your results?
e. Based on your results, what action item(s) do you recommend the institution address in the next academic year?

3. Please attach a copy of the syllabus for this general education course.

Sample Application from a Department for a Gen Ed Course

Department: English  Course Title:  Introduction to Literature

1. Learning objectives and assessment evidence for this course, related to Gen-Ed learning goals

<table>
<thead>
<tr>
<th>Gen-ed Learning Goal</th>
<th>Course Objectives</th>
<th>What Evidence is Gathered BY THE DEPARTMENT about student achievement of these objectives?</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1 Students will think critically and analytically about an issue, idea, or problem</td>
<td>Students will write an essay using literary critical techniques to establish and defend an interpretation of literature, and will address counter-interpretations.</td>
<td>Students in all sections will write at least one literary-critical essay that requires these qualities.</td>
</tr>
<tr>
<td>#2 Students will communicate effectively orally and in writing to various audiences</td>
<td>Students will express their ideas about literature in written essays. The writing will be well-organized, clear, and consonant with Edited Standard Written English (ESWE)</td>
<td>Essays, as above.</td>
</tr>
<tr>
<td>#5 Students will follow ethical principles for academic work</td>
<td>Students will appropriately cite sources for their work. They will avoid plagiarism.</td>
<td>Essays, as above.</td>
</tr>
<tr>
<td>#6 Students will demonstrate appreciation for cultures different from their own</td>
<td>Students’ interpretations of literature will demonstrate appreciation for the cultures, contexts, and literary conventions from which the literature arises.</td>
<td>Essays, as above.</td>
</tr>
</tbody>
</table>

2. How will classroom evaluations be used for classroom decision-making?
Department?

Each year, faculty teaching general-education courses will submit to the department a report on students’ strengths and students’ difficulties in meeting these objectives, the
Efforts the faculty member has taken to address challenges, and the instructor’s recommendation about aspects the department as a whole could work on. [OR: each year, a departmental committee will evaluate a sample of essays from multiple sections of the course and will administer a student survey to gen-ed students in multiple sections. The committee will report these data to the department.] The department [or the undergraduate studies committee] will meet annually to review these data and to take actions intended to improve student learning. The department will keep minutes of these meetings and records of its actions.

3. **If more than one faculty member is teaching the course, how does the department assure that all sections follow the guidelines explained above?**
   Annually, the department distributes to all its gen-ed faculty a copy of the objectives and guidelines for assessment. Samples of student work are taken from multiple sections. An orientation meeting for all new instructors helps them understand the assessment expectations.

4. **Will the department be willing to submit an annual report to the General Education Committee reporting (in the aggregate) its faculty’s findings about students’ strengths and weaknesses, and its own actions?** Yes

**The Basic, No-Frills Department/Program Assessment System**

1. Learning goals (at the end of the program, students will be able to…)
2. Two measures:
   a. One direct measure (direct means student performance is directly evaluated, as in tests, exams, projects, interactions with clients, etc.). A direct measure must be included; surveys and other indirect measures alone will not be sufficient.
      i. Review of end-point senior or grad student work by faculty. Grades will not suffice as a measure. Describe the student work that was analyzed and the criteria that were used.
      ii. If students take a licensure or certification exam, this will be added as a second direct measure
   b. One indirect measure (indirect means an intervening step, such as asking students what they thought they learned, or tracking their career or their acceptance into further education)
      i. My preference: student survey, interviews, and/or focus groups asking three questions:
         1. How well did you achieve each of the following departmental learning goals [use scale such as “extremely well, very well, adequately well, not very well, not at all”]
            [list each department goal, with scoring scale for each]
         2. What aspects of your education in this department helped you with your learning, and why were they helpful?
         3. What might the department do differently that would help you learn more effectively, and why would these actions help?
      ii. Second choice: Alumni surveys
iii. In some fields, job placement rates will be important

3. ACTION.
   a. I suggest an annual meeting: set aside at least 2 hours to discuss ONE of your degree programs.
   b. Put the annual meeting in place NOW, without waiting for the perfect data.
   c. At the meeting, consider whatever data you have about learning, no matter how incomplete or inadequate.
   d. Outcomes of the meeting:
      i. ONE action item to improve student learning, with a timeline and assignment of responsibility
      ii. ONE action item to improve the quality of data, if needed, with a timeline and assignment of responsibility
   e. Keep minutes of the meeting
      i. To serve as your own record and reminder
      ii. To document for accreditors that assessment is taking place

Tips:
- Do not ask for more information than you will use.
- Keep annual assessment reports to 2 pages per program, but insist that programs give specific, genuine information so the reader knows there is substance behind the words.
- If you have a required for (e.g. NEASC) for department and gen-ed assessment, ask departments and programs to fill it out themselves. Do not ask them to submit information on a different form and then have your own staff copy the information.
- Fold annual assessment reports into program review, planning, and budgeting
- Hold a "do-it-now" workshop of 3 hours for department teams, walking them through the entire assessment process. Then use individual conferences to follow up with departments.
- Do not stage the assessment process over multiple years (year 1 we articulate learning outcomes; year 2 we gather data; year 3 we take action). This assumes that assessment is brand new. Instead, assume that departments already have at least some components of assessment. Have them complete their annual report reflecting their current assessment. Then ask them to generate plans for improvement of the assessment system if needed.
- Central administration must require assessment of learning as a basis for any budgeting request.
- Think carefully about special software. Assessment can be done in Word or in your regular course management software, or with free programs online. Who needs to examine what? How will it be collected, stored, aggregated, and disseminated? You do not necessarily need to aggregate rubric scores at the institutional or gen-ed level. You can work from reports based on analysis of student work in classrooms and departments.
- Something important has to happen because a department conducted good assessment.
- Allow programs that are accredited by other agencies to piggy-back on that assessment (for an example, see NEASC form E.1.B at http://cihe.neasc.org/institutional-reports-resources/institutional-data-forms, and choose "E Series.")
- For regional accreditation, focus on the programs that are not otherwise accredited. Do not fill up your self-study with glowing descriptions of assessment in nursing or education--tell them about philosophy and sociology.
## Appendix A: Sample Reports from Programs

### Sample: Political Science (completed by Walvoord as an example, using NEASC form E.1.A.)

**Example: Theater Majors**

1. **Learning Goals:**

   All theater majors should be able to:

   1. Apply fundamental critical thinking skills to the analysis and interpretation of dramatic literature with particular attention to acting, designing, or technical production. Such skills to include close reading of dramatic texts, analysis of genre, written and verbal presentations, and cross-cultural and cross-period research and analysis. Students must use both verbal and non-verbal aspects of communication in the presentation of resulting creative works.
   2. Select and use, with safety and efficiency, the tools and equipment basic to theatre production technology including those required for both set and costume construction.
   3. Communicate to an audience through at least one of the components of theatrical art: acting, designing, stage managing, or technical production.
   4. Function effectively as a member of a theatre production team in the preparation of regularly scheduled public productions.

2. **Gathering and Using Information about Student Achievement of the Goals**

<table>
<thead>
<tr>
<th>Measure</th>
<th>Goal</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capstone Senior Project. Every senior student makes 10-12-minute presentation of work in his/her area (e.g. acting, design/production) before the entire faculty.</td>
<td>1, 3</td>
<td>Following each round of senior project presentations, faculty each complete evaluation in his/her own discipline, shared with other faculty and with the student. Faculty award grades. When significant number of student fail to pass or overall quality is low, faculty hold separate meeting to identify causes and take action.</td>
</tr>
<tr>
<td>Student Acting Auditions presented by each acting- emphasis student before members of acting faculty.</td>
<td>1, 3</td>

<td>Goal</td>
<td>Use</td>
</tr>
<tr>
<td>---------</td>
<td>------</td>
<td>-----</td>
</tr>
<tr>
<td>Theatre Productions. Each major participates in at least one production of a live theatre performance for the public. Students are evaluated by faculty in their discipline at the end of each scheduled production on their ability to work effectively as a team member and communicate with the audience through their chosen medium. Faculty in all the disciplines collaborate to reach composite understanding of the student’s overall performance and the performance of the students as a group.</td>
<td>1, 2, 3, 4</td>
<td>When a negative pattern emerges, faculty meet to diagnose any problems in curriculum, course sequencing, and/or instruction methods.</td>
</tr>
<tr>
<td>Exit Surveys and Interview. All graduating seniors are encouraged to meet with the chair for an exit interview. Students are asked to share their general impressions about the program.</td>
<td>1, 2, 3, 4</td>
<td>Results from interviews are shared with full time faculty at each annual faculty retreat.</td>
</tr>
</tbody>
</table>

3. Examples of Change Based on Assessment Information

- Acting faculty concluded that many seniors were failing to organize their senior projects to best reflect their actual skills. Faculty reconstructed the course so that it is now under the guidance of a single instructor (as opposed to individual academic advisors), and guided by a more detailed syllabus with progressive deadlines to keep students on track.

- In the acting auditions, in 2008, faculty noted that many first year students were performing poorly in the area of audience communication, referred to as “poise, clarity and brevity of introduction.” The following year, the instructors for Craft of Acting I adjusted their lesson plans to include exercises addressing this specific issue at the end of the semester prior to auditions. Acting faculty have since noted a substantial improvement in first year students’ auditions in this area.

- In 2007, in evaluating the student productions, design/production faculty pointed out that otherwise strong student designers sometimes failed to act as good team members because they had varying notions of their duties and expectations. Faculty responded by researching other university theatre department guidelines for student designers and developing their own. These universal guidelines have greatly improved communication and resulted in much better teamwork among production/design students.
4. Recommendations for Changes to the Assessment Process

To make the interview data more clear and specific, we intend to begin asking standardized questions.

**Example: Ph. D. Program**

1. **Goals**

   When students complete the Ph.D. they should be able to:
   1. Conduct original, publishable research in the field.
   2. Demonstrate a broad knowledge of theory and research across several sub-disciplines in the field.
   3. Demonstrate in-depth knowledge of one area of expertise.
   4. Follow ethical guidelines for work in the field.
   5. Write and speak effectively to professional and lay audiences about issues in the field.
   6. For those entering teaching: grade and comment effectively on undergraduate student work, lead discussion and recitation effectively for undergraduates, demonstrate familiarity with the literature on learning and pedagogy, write a thoughtful teaching philosophy, and plan an effective undergraduate course in the field.

2. **Gathering and Using Information about Student Achievement of the Goals**

<table>
<thead>
<tr>
<th>Measures</th>
<th>Goals Addressed</th>
<th>Use of the Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each January the Graduate Committee reviews all theses and dissertations produced during the previous year for originality and cogency of the theoretical and empirical work, and clarity of the presentation. The committee produces a report of overall strengths and weaknesses, as well as recommendations for the program.</td>
<td>1, 2, 3, 4</td>
<td>The report is presented annually to the graduate faculty for discussion and action as appropriate. Summaries are presented for review and recommendations every 7-8 years as part of academic review.</td>
</tr>
<tr>
<td>The department tracks graduates’ employment and placement for a period of 5 years.</td>
<td>1, 2, 3, 4</td>
<td>As above</td>
</tr>
<tr>
<td>The university’s Graduate School conducts student exit interviews that ask students about their learning and the factors that influenced</td>
<td>all</td>
<td>As above</td>
</tr>
</tbody>
</table>
their learning. These are reported annually to the Director of Graduate Studies.

<table>
<thead>
<tr>
<th>For those entering teaching: Each faculty member with an assigned TA writes an annual report that evaluated the quality of work the TA has done.</th>
</tr>
</thead>
<tbody>
<tr>
<td>The instructor of the one-credit graduate teaching course analyzes strengths and weaknesses of students’ written teaching-philosophy statements and their course plans.</td>
</tr>
<tr>
<td>5</td>
</tr>
<tr>
<td>As above. Reports by faculty with TA’s and by the teaching course instructor are presented annually to the Graduate Director, who summarizes them in a report to the Grad Committee.</td>
</tr>
</tbody>
</table>

### 3. Examples of Changes Based on Assessment Information

- In 2001, an analysis of student publications and presentations, compared to those of peer departments, showed the number of publications was not as high as the department wished. We instituted a one-credit required seminar for all graduate students focusing on the production and placement of articles and presentations. Since then, the number of articles and presentations has risen 32%.
- Analysis of theses over several years raised faculty concerns about the quality of the writing. In response, the department hired a writing coach to work individually with each candidate on his/her writing.

### 4. Recommendations for Changes in the Assessment Process

- Faculty have requested more guidance in writing their reviews of TA work, and the Graduate Director has asked for more unanimity in those reports, to facilitate the work of analyzing them. A sub-committee has been formed to draft guidelines for students’ work in grading papers and in leading discussion/recitation sections.
Example: Master’s Degree

Student Learning Outcomes

Most graduate programs have versions of these three outcomes:
1. Conduct original work in the field (for master’s with thesis) or complete a substantial project related to the field
2. Demonstrate ability to carry out professional responsibilities in an ethical manner
3. Master and be able to apply concepts, information, and methods in the field

Make these field-specific. For example, master’s in marine science/oceanography: Students completing the M.S. Degree in Marine Science will demonstrate the ability to formulate a significant scientific problem, design an approach to solving the problem, and support the proposed research with appropriate and in-depth oceanographic or other scientific background. Students should integrate core interdisciplinary concepts of Marine Science/Oceanography into their research proposal.

Example: Organization of Assessment Data for Economics
Departmental Discussion

Measures

- Direct: **Analysis of the senior capstone research** projects (written papers plus oral presentations). Three faculty examined a sample of written papers and attended oral presentations for a sample of senior students. These faculty produced written analyses of the student work, using the learning goals as criteria. These analyses were submitted to the assistant chair.

- **Focus groups of current students**, who met for an hour with the assistant chair

- **Alumni Survey**, conducted by the department under the leadership of the assistant chair, asking alumni to
  - Rate how important each of the learning goals were to them in their careers. 5 = essential; 4 = very important; 3 = important; 2 = slightly important; 1 = not important
  - Rank how well they had achieved this goal during their major. 7th = highest; 1st = lowest.

Goals, Assessment Methods, and Findings

**Goal:** Critical thinking (analytical) and communication skills, to enable undergraduate students to think and communicate like economists (in other words, to become skilled in the logic and rhetoric of economics)

<table>
<thead>

Appendix B: Rubrics

Example: Rubric for Senior Biology Scientific Report

by Virginia Johnson Anderson, Towson University, Towson, MD

Assignment: Semester-long assignment to design an original experiment, carry it out, and write it up in scientific report format. This is the major assignment in this course, titled “Scientific Research.” The course was instituted recently as a result of employer feedback that students were insufficiently prepared to really understand and carry out the scientific method. The goal of the course is to prepare students to conduct original scientific research and present it orally and in writing. There were no resources to make this a lab course, so the students had to conduct research outside the lab. Most student graduates will be working with commercial products in commercial labs in the area, e.g. Noxell. In the assignment, students are to determine which of two brands of a commercial product (e.g. two brands of popcorn) are “best.” They must base their judgment on at least four experimental factors (e.g. “% of kernels popped” is an experimental factor. Price is not, because it is written on the package).

Title
5 - Is appropriate in tone and structure to science journal; contains necessary descriptors, brand names, and allows reader to anticipate design.
4 - Is appropriate in tone and structure to science journal; most descriptors present; identifies function of experimentation, suggests design, but lacks brand names.
3 - Identifies function, brand name, but does not allow reader to anticipate design.
2 - Identifies function or brand name, but not both; lacks design information or is misleading
1 - Is patterned after another discipline or missing.

Introduction
5 - Clearly identifies the purpose of the research; identifies interested audiences(s); adopts an appropriate tone.
4 - Clearly identifies the purpose of the research; identifies interested audience(s).
3 - Clearly identifies the purpose of the research.
2 - Purpose present in Introduction, but must be identified by reader.
1 - Fails to identify the purpose of the research.

Scientific Format Demands
5 - All material placed in the correct sections; organized logically within each section; runs parallel among different sections.
4 - All material placed in correct sections; organized logically within sections, but may lack parallelism among sections.
3 - Material place is right sections but not well organized within the sections; disregards parallelism.
2 - Some materials are placed in the wrong sections or are not adequately organized wherever they are placed.
1 - Material placed in wrong sections or not sectioned; poorly organized wherever placed.

Materials and Methods Section
5 - Contains effective, quantifiable, concisely-organized information that allows the experiment to be replicated; is written so that all information inherent to the document can be related back to this section; identifies sources of all data to be collected; identifies sequential information in an appropriate chronology; does not contain unnecessary, wordy descriptions of procedures.

4 - As above, but contains unnecessary information, and/or wordy descriptions within the section.

3 - Presents an experiment that is definitely replicable; all information in document may be related to this section; however, fails to identify some sources of data and/or presents sequential information in a disorganized, difficult pattern.

2 - Presents an experiment that is marginally replicable; parts of the basic design must be inferred by the reader; procedures not quantitatively described; some information in Results or Conclusions cannot be anticipated by reading the Methods and Materials section.

1 - Describes the experiment so poorly or in such a nonscientific way that it cannot be replicated.

**Non-experimental Information**

5 - Student researches and includes price and other non-experimental information that would be expected to be significant to the audience in determining the better product, or specifically states non-experimental factors excluded by design; interjects these at appropriate positions in text and/or develops a weighted rating scale; integrates non-experimental information in the Conclusions.

4 - Student acts as above, but is somewhat less effective in developing the significance of the non-experimental information.

3 - Student introduces price and other non-experimental information, but does not integrate them into Conclusions.

2 - Student researches and includes price effectively; does not include, or specifically excludes, other non-experimental information.

1 - Student considers price and/or other non-experimental variables as research variables; fails to identify the significance of these factors to the research.

**Designing an Experiment**

5 - Student selects experimental factors that are appropriate to the research purpose and audience; measures adequate aspects of these selected factors; establishes discrete subgroups for which data significance may vary; student demonstrates an ability to eliminate bias from the design and bias-ridden statements from the research; student selects appropriate sample size, equivalent groups, and statistics; student designs a superior experiment.

4 - As above, but student designs an adequate experiment.

3 - Student selects experimental factors that are appropriate to the research purpose and audience; measures adequate aspects of these selected factors; establishes discrete subgroups for which data significance may vary; research is weakened by bias OR by sample size of less than 10.

2 - As above, but research is weakened by bias AND inappropriate sample size

1 - Student designs a poor experiment.

**Defining Operationally**
5 - Student constructs a stated comprehensive operational definition and well-developed specific operational definitions.
4 - Student constructs an implied comprehensive operational definition and well-developed specific operational definitions.
3 - Student constructs an implied comprehensive operational definition (possible less clear) and some specific operational definitions.
2 - Student constructs specific operational definitions, but fails to construct a comprehensive definition.
1 - Student lacks understanding of operational definition.

**Controlling Variables**
5 - Student demonstrates, by written statement, the ability to control variables by experimental control and by randomization; student makes reference to, or implies, factors to be disregarded by reference to pilot or experience; superior overall control of variables.
4 - As above, but student demonstrates an adequate control of variables.
3 - Student demonstrates the ability to control important variables experimentally; Methods and Materials section does not indicate knowledge of randomization and/or selected disregard of variables.
2 - Student demonstrates the ability to control some, but not all, of the important variables experimentally.
1 - Student demonstrates a lack of understanding about controlling variables.

**Collecting Data and Communicating Results**
5 - Student selects quantifiable experimental factors and/or defines and establishes quantitative units of comparison; measures the quantifiable factors and/or units in appropriate quantities or intervals; student selects appropriate statistical information to be utilized in the results; when effective, student displays results in graphs with correctly labeled axes; data are presented to the reader in text as well as graphic forms; tables or graphs have self-contained headings.
4 - As 5 above, but the student did not prepare self-contained headings for tables or graphs.
3 - As 4 above, but data reported in graphs or tables contain materials that are irrelevant and/or not statistically appropriate.
2 - Student selects quantifiable experimental factors and/or defines and establishes quantitative units of comparison; fails to select appropriate quantities or intervals and/or fails to display information graphically when appropriate.
1 - Student does not select, collect, and/or communicate quantifiable results.

**Interpreting Data: Drawing Conclusions/Implications**
5 - Student summarizes the purpose and findings of the research; student draws inferences that are consistent with the data and scientific reasoning and relates these to interested audiences; student explains expected results and offers explanations and/or suggestions for further research for unexpected results; student presents data honestly, distinguishes between fact and implication, and avoids overgeneralizing; student organizes non-experimental information to support conclusion; student accepts or rejects the hypothesis.
4 - As 5 above, but student does not accept or reject the hypothesis.
3 - As 4 above, but the student overgeneralizes and/or fails to organize non-experimental information to support conclusions.

2 - Student summarizes the purpose and findings of the research; student explains expected results, but ignores unexpected results.

1 - Student may or may not summarize the results, but fails to interpret their significance to interested audiences.

**Example: Rubric for Evaluating Student Literary-Critical Essays**

Note: such a rubric may be developed for use by all faculty teaching the gen-ed literature course, or faculty may be free to develop their own rubrics, perhaps using this as a guideline, or faculty may be asked to incorporate one or two common items into their own rubric.

<table>
<thead>
<tr>
<th>5</th>
<th>4</th>
<th>3</th>
<th>2</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Thesis:</strong> The thesis of the paper is clear, complex, and challenging. It does not merely state the obvious or exactly repeat others’ viewpoints, but creatively and thoughtfully opens up our thinking about the work.</td>
<td>The thesis is both clear and reasonably complex.</td>
<td>The thesis of the paper is clear. It takes a stand on a debatable issue, though the thesis may be unimaginative, largely a recapitulation of readings and class discussion, and/or fairly obvious.</td>
<td>Thesis is relevant to the assignment. It is discernible, but the reader has to work to understand it.</td>
<td>Thesis is irrelevant to the assignment and/or not discernible.</td>
</tr>
<tr>
<td><strong>Complexity and Originality:</strong> The essay is unusually thoughtful, deep, creative, and far-reaching in its analysis. The writer explores the subject from various points of view, acknowledges alternative interpretations, and recognizes the complexity of insider and outsider issues in literature and in life. Other works we have read and ideas we have discussed are integrated as relevant. The essay shows a curious mind at work.</td>
<td>The essay is thoughtful and extensive in its analysis. It acknowledges alternative interpretations and recognizes complexity in literature and in life. Some other works are integrated as relevant.</td>
<td>The writer goes somewhat beyond merely paraphrasing someone else’s point of view or repeating what was discussed in class. AND/OR the essay does not integrate other relevant works we have read.</td>
<td>Writer moves only marginally beyond merely paraphrasing someone else’s point of view or repeats what was discussed in class.</td>
<td>The paper is mere paraphrase or repetition.</td>
</tr>
<tr>
<td><strong>Organization and Coherence:</strong> The reader feels that the writer is in control of the direction and organization of the essay. The essay follows a logical line of reasoning to support its thesis and to deal with</td>
<td>As for “5” but sub-points may not be fashioned to open up the topic in the most effective way.</td>
<td>The reader feels that the writer is in control of the direction and organization of the essay most of the time. The essay</td>
<td>The essay has some discernible main points.</td>
<td>The essay has no discernible plan of organization.</td>
</tr>
<tr>
<td>5</td>
<td>4</td>
<td>3</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td><strong>counter-evidence and alternative viewpoints. Sub-points are fashioned so as to open up the topic in the most effective way.</strong></td>
<td><strong>Evidence, Support:</strong> The writer’s claims and interpretations are backed with evidence from the literature, works we have read, secondary sources, and sensible reasoning. The writer assumes the reader has read the work and does not need the plot repeated, but the writer refers richly and often to the events and words of the novel to support his/her points.</td>
<td>The writer’s claims and interpretations about the works are generally backed with at least some evidence from the works. The writer assumes the reader has read the work and does not need the plot repeated.</td>
<td>The writer’s claims are sometimes backed with evidence. The paper descends at times into plot summary.</td>
<td>The paper is primarily plot summary.</td>
</tr>
<tr>
<td><strong>As for “5” but the writer may occasionally drop into mere plot summary</strong></td>
<td><strong>The language is clear and precise.</strong></td>
<td><strong>The language is understandable throughout.</strong></td>
<td><strong>The language is sometimes confusing. Sentences do not track.</strong></td>
<td><strong>The language is often confusing. Sentences and paragraphs do not track.</strong></td>
</tr>
<tr>
<td><strong>Sources:</strong> The essay integrates secondary sources smoothly. It quotes when the exact words of another author are important, and otherwise paraphrases. It does not just string together secondary sources, but uses them to support the writer’s own thinking. Each source is identified in the text, with some statement about its author; there are no quotes just stuck into the text without context.</td>
<td><strong>As for “5” but sources may be quoted with no contextual explanation AND/OR writer may use direct quotation and paraphrase in less than optimal ways.</strong></td>
<td><strong>The essay does not just string together secondary sources, but uses them to support the writer’s own thinking.</strong></td>
<td><strong>The essay strings together secondary sources.</strong></td>
<td><strong>There is no use of secondary sources.</strong></td>
</tr>
<tr>
<td>5</td>
<td>4</td>
<td>3</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>explanation.</td>
<td>There are a few departures from ESWE</td>
<td>There are no more than an average of 2 departures from ESWE per page in the critical areas listed below.</td>
<td>There are more than 2.</td>
<td>Some portion of the essay is impossible to read because of departures from ESWE.</td>
</tr>
</tbody>
</table>

**Grammar, Punctuation:** There are no discernible departures from Standard Edited Written English (ESWE)

- Spelling or typo
- Sentence boundary punctuation (run-ons, comma splices, fused sentences, fragments)
- Use of apostrophe, -s, and -es
- Pronoun forms
- Pronoun agreement, and providing antecedents for pronouns
- Verb forms and subject-verb agreement
- Use of gender-neutral language
- Capitalization of proper nouns and of first words in the sentence

**Example: Rubric for Journals in English Literature**

Assignment: Journals are to record students’ questions about the literature and to consider how the literature relates to their own lives and values. To achieve a C or above, the journal must be handed in on time, must contain the required number of daily entries, and each entry must be at least 250 words. The faculty member collects and grades the journal entries periodically throughout the course; thus each grade reflects a number of journal entries. The faculty member grades the journal entries on only two criteria: posing questions and connecting the literature to the students’ own lives and values.

**Posing Questions**

1. The journal entries do not pose any questions
2. The journal entries pose only factual or obvious questions
3. The journal entries pose a few questions that address larger issues of the work of literature, beyond what is factual or obvious.
4. The journal entries pose a number of questions that address larger issues.
5. The journal entries pose a number of questions that address larger issues, and when a question is posed, the student almost always muses in creative ways about the question,
extending it to related areas, bringing in other readings, noting underlying assumptions, or in other ways deepening the inquiry, showing a curious mind at work.

**Connecting literature to students’ own lives and values**

1. Journal entries merely summarizes the literature OR merely reflect on the student’s own life and values
2. Journal entries summarize the literature AND reflect on the student’s life and values, but make little or no explicit connection between the two
3. Entries use the literature in a very simple way to draw “lessons” to apply to the student’s own life
4. A few entries make thoughtful links between the literature and the student’s own life and values. They use the literature as a vehicle for pushing and exploring the student’s own life and values. They recognize the complexity both of the literary work and of life and values.
5. All of the entries do as in 4 above. The students’ musings are rich and deep, showing a thoughtful, reflective mind at work.

**Example: Rubric for Online Discussion**

1. Responder addresses the issue and includes at least one question.

2. As for 1, AND responder uses at least one of the critical thinking strategies we have been discussing: identifying assumptions, discussing multiple perspectives, raising and answering counter-arguments, offering evidence, questioning evidence, drawing analogies, evaluating quality according to clear criteria, and exploring implications, causes, or consequences; OR the responder addresses other students’ views in a way that goes beyond merely “I agree” or “I disagree.”

3. As for 1, but the responder BOTH uses critical thinking strategies and also refers to other students’ views.

4. This one knocks my socks off. The response does everything for 3, but the thinking is creative and exploratory. The writer recognizes the complexity of issues and raises provocative questions for further discussion. The writer may bring in material from outside readings in this or other classes. Response shows a highly creative, engaged, and curious mind at work.
**Example: Rubric for Oral Defense of internship for PSM in Applied Biotechnology, Oregon State University**

</tr>
</tbody>
</table>

**Alternatives to Rubrics**

In addition to, or instead of, rubrics, a department might produce a prose analysis or a list of concerns about the writing.
Example
Department of Finance, Seattle University:

A committee of faculty examined student senior assignments, in which seniors were asked to write a letter of advice to a hypothetical client—a couple where the wife was retiring and wanted to know whether to invest her lump-sum retirement payout in an annuity or in stocks and bonds.

The faculty members identified four concerns about the student work:

- Random rather than purposeful application of finance tools and methodologies
- Failure to address the client’s problem and provide the requested financial counsel
- Inability to translate finance concepts and methods into lay language
- Failure to construct rhetorically useful graphics.

The VALUE rubrics were developed by teams of faculty experts representing colleges and universities across the United States through a process that examined many existing campus rubrics and related documents for each learning outcome and incorporated additional feedback from faculty. The rubrics articulate fundamental criteria for each learning outcome, with performance descriptors demonstrating progressively more sophisticated levels of attainment. The rubrics are intended for institutional-level use in evaluating and discussing student learning, not for grading. The core expectations articulated in all 15 of the VALUE rubrics can and should be translated into the language of individual campuses, disciplines, and even courses. The utility of the VALUE rubrics is to position learning at all undergraduate levels within a basic framework of expectations such that evidence of learning can be shared nationally through a common dialog and understanding of student success.

**Definition**

Critical thinking is a habit of mind characterized by the comprehensive exploration of issues, ideas, artifacts, and events before accepting or formulating an opinion or conclusion.

**Framing Language**

This rubric is designed to be transdisciplinary, reflecting the recognition that success in all disciplines requires habits of inquiry and analysis that share common attributes. Further, research suggests that successful critical thinkers from all disciplines increasingly need to be able to apply those habits in various and changing situations encountered in all walks of life.

This rubric is designed for use with many different types of assignments and the suggestions here are not an exhaustive list of possibilities. Critical thinking can be demonstrated in assignments that require students to complete analyses of text, data, or issues. Assignments that cut across presentation mode might be especially useful in some fields. If insight into the process components of critical thinking (e.g., how information sources were evaluated regardless of whether they were included in the product) is important, assignments focused on student reflection might be especially illuminating.

**Glossary**

The definitions that follow were developed to clarify terms and concepts used in this rubric only.

- Ambiguity: Information that may be interpreted in more than one way.
- Assumptions: Ideas, conditions, or beliefs (often implicit or unstated) that are "taken for granted or accepted as true without proof." (quoted from www.dictionary.reference.com/browse/assumptions)
- Context: The historical, ethical, political, cultural, environmental, or circumstantial settings or conditions that influence and complicate the consideration of any issues, ideas, artifacts, and events.
- Literal meaning: Interpretation of information exactly as stated. For example, "she was green with envy" would be interpreted to mean that her skin was green.
- Metaphor: Information that is (intended to be) interpreted in a non-literal way. For example, "she was green with envy" is intended to convey an intensity of emotion, not a skin color.
CRITICAL THINKING VALUE RUBRIC
for more information, please contact value@aacu.org

Definition
Critical thinking is a habit of mind characterized by the comprehensive exploration of issues, ideas, artifacts, and events before accepting or formulating an opinion or conclusion.

Evaluators are encouraged to assign a zero to any work sample or collection of work that does not meet benchmark (cell one) level performance.

<table>
<thead>
<tr>
<th></th>
<th>Capstone</th>
<th>Milestones</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation of issues</strong></td>
<td>Issue/problem to be considered critically is stated clearly and described comprehensively, delivering all relevant information necessary for full understanding.</td>
<td>Issue/problem to be considered critically is stated, described, and clarified so that understanding is not seriously impeded by omissions.</td>
<td>Issue/problem to be considered critically is stated but description leaves some terms undefined, ambiguities unexplored, boundaries undetermined, and/or backgrounds unknown.</td>
</tr>
<tr>
<td><strong>Evidence</strong></td>
<td>Information is taken from source(s) with enough interpretation/evaluation to develop a comprehensive analysis or synthesis. Viewpoints of experts are questioned thoroughly.</td>
<td>Information is taken from source(s) with enough interpretation/evaluation to develop a coherent analysis or synthesis. Viewpoints of experts are subject to questioning.</td>
<td>Information is taken from source(s) with some interpretation/evaluation, but not enough to develop a coherent analysis or synthesis. Viewpoints of experts are taken as mostly fact, with little questioning.</td>
</tr>
<tr>
<td><strong>Influence of context and assumptions</strong></td>
<td>Thoroughly (systematically and methodically) analyzes own and others' assumptions and carefully evaluates the relevance of contexts when presenting a position.</td>
<td>Identifies own and others' assumptions and several relevant contexts when presenting a position.</td>
<td>Questions some assumptions. Identifies several relevant contexts when presenting a position. May be more aware of others' assumptions than one's own (or vice versa).</td>
</tr>
<tr>
<td><strong>Student's position (perspective, thesis/hypothesis)</strong></td>
<td>Specific position (perspective, thesis/hypothesis) is imaginative, taking into account the complexities of an issue. Limits of position (perspective, thesis/hypothesis) are acknowledged. Others' points of view are synthesized within position (perspective, thesis/hypothesis).</td>
<td>Specific position (perspective, thesis/hypothesis) takes into account the complexities of an issue. Others' points of view are acknowledged within position (perspective, thesis/hypothesis).</td>
<td>Specific position (perspective, thesis/hypothesis) acknowledges different sides of an issue.</td>
</tr>
<tr>
<td><strong>Conclusions and related outcomes (implications and consequences)</strong></td>
<td>Conclusions and related outcomes (consequences and implications) are logical and reflect student's informed evaluation and ability to place evidence and perspectives discussed in priority order.</td>
<td>Conclusion is logically tied to a range of information, including opposing viewpoints; related outcomes (consequences and implications) are identified clearly.</td>
<td>Conclusion is logically tied to information (because information is chosen to fit the desired conclusion); some related outcomes (consequences and implications) are identified clearly.</td>
</tr>

How will classroom evaluations be used for classroom decision-making? Departmental decision-making?

Each semester, faculty teaching general-education courses will submit to the department a report on students’ strengths and weaknesses measured against the objectives. The faculty will meet to share their own plans for change and to recommend changes to the department as needed. The department will act as needed to address difficulties. The department will keep minutes of these meetings and records of its actions based on classroom assessment.

If more than one faculty member is teaching the course, how does the department assure that all sections follow the guidelines explained above?

Annually, the department distributes to all its gen-ed faculty a copy of the objectives and guidelines for assessment. At the annual meeting, faculty share their findings about student strengths and weaknesses, and exchange ideas and best practices.

Will the department be willing to submit an annual report to the General Education Committee reporting (in the aggregate) its faculty’s findings about students’ strengths and weaknesses, and its own actions?

Yes
Resources

National Institute for Learning Outcomes Assessment (NILOA). A great clearinghouse with lots of information and resources. www.learningoutcomesassessment.org

students, and guiding the learning process. Final sections discuss how to use student classroom work for assessment in one’s own classroom, in grant-funded projects, in departments, general education, and the institution.
