

Howard R. Mzumara, Ph.D.,

Director of Evaluation and Psychometric Services

IUPUI Office of Institutional Research and Decision Support (IRDS)

Revisiting Course Evaluations: Strategies to Minimize Gender and Racial Biases in Student Evaluations of Teaching

Presentation given at the Assessment Institute in Indianapolis, IN

October 14, 2019

Outline

- Objectives of this Session
- Quick Facts and Data about IUPUI
- Gender/Racial Biases in Student Evaluations of Teaching (SET)
- Potential Sources of Biases in SET
- Strategies to Mitigate Biases in SET
- Tips to Optimize the Utility of Course Evaluation Data
 - Using Student Feedback More Effectively for **Formative** and **Summative Evaluation**

Session Objectives

1. Raise awareness of growing evidence of gender or racial bias in course evaluations.
2. Provide illustrative examples of a growing body of literature examining gender and/or racial biases in course evaluations.
3. Identify potential sources of gender or racial bias in student evaluations of teaching.
4. Discuss strategies to mitigate implicit/explicit bias that may exist in course evaluations.

IUPUI: Quick Facts and Data

- Indiana **U**niversity-**P**urdue **U**niversity **I**ndianapolis; Established in 1969
- Fall 2019 Data: **29,537 students** [21,173 undergraduate & 8,364 graduate students from 144 countries and all 50 states in USA; 30% minority students; 58% female, 42% male]
- **17 distinct schools** and **2 colleges** that confer degrees thru **IU & PU**
 - **2 Purdue Schools** (Engineering & Technology, Science)
 - **15 IU Schools** (Business, Dentistry, Education, Herron Arts & Design, Health & Human Sciences, Informatics & Computing, Law, Liberal Arts, Medicine, Nursing, Philanthropy, Public & Environmental Affairs, Public Health, Social Work, University Graduate School;
 - **2 Colleges** (Honors College, University College)
- Offers more than **350 undergraduate, graduate, and professional programs**
- **Strong research focus**
- Destination campus for **health and life sciences**

IUPUI – BLUE Users

Fall 2018

Total # of Academic Units Using BLUE Course Evaluations: 15
Total # of Courses marked “Evaluate”: ~ 4,547 out of 7,782 courses
(Decentralized process ... with a wide variety of instruments in use)

- Business (Indianapolis)
- Education
- Engineering and Technology
- Health and Human Sciences
- Herron Art and Design
- Informatics and Computing
- Law
- Liberal Arts
- Medicine (Radiology and Imaging Sci.; Pathology & Lab Medicine Departments)
- Philanthropy
- Public Health
- Science
- Social Work
- Public & Environmental Affairs (via Blue Project administered at IUB)
- University College

Brief Overview of Gender/Racial Bias in SET

- ❖ **Key questions: Are student evaluations of teaching (SET) biased against women faculty, and what are the implications of this bias?** (Why this matters...)
- ❖ Recent research studies (e.g., Boring, 2017; MacNell, Driscoll, & Hunt, 2015; Martin, 2016, Mitchell & Martin, 2018; Peterson, Biederman, *et al.*, 2019; Rosen, 2017; etc.) provide **evidence of gender bias in course evaluations**.
- ❖ Specifically, recent research studies suggest that:
 - **women professors obtain lower ratings** than male professors.
 - **women faculty are judged more critically** (or on a **different set of criteria**) than their men counterparts in (at least two ways):
 - **qualification/competence** and **personality**
 - **“Minority faculty obtain significantly lower ratings than white professors**, even after controlling for tenure status and course type” [e.g., see research articles by Chisadza, Nicholls, & Yitbarek, 2019; Merritt, 2008; Reid, 2010; Smith & Hawkins, 2011; etc.].

Implications for Gender/Racial Bias in SET

Consider the implications for using student feedback for **Summative Evaluation** purposes:

- If, as the mounting empirical evidence suggests, **course evaluations are biased against women**, then the **use of evaluations to make personnel decisions** (such as hiring, awards, promotion and tenure) might be **discriminatory** or **yield negative outcomes**.
- Also, consider potential bias in **race, ethnicity, and English proficiency of faculty**...

Potential Sources of Bias in SET

- ❖ Use of global, generic, or ambiguous questionnaire items that are **unspecific** and not linked to any particular instructor behavior or specific course elements, such as:
 - “Overall, how do you rate this instructor?”
 - “Overall, this is an excellent instructor.”
 - “Overall, this is an outstanding professor.”
 - “What is the overall rating of the instructor’s teaching effectiveness?”
 - “Overall, how do you rate this course?”
 - “Overall, this is an excellent course.”
 - “What is your overall rating of this course?”

Experimental Research Study on Mitigating Gender Bias in SET

(Ref: Peterson, Biederman, Andersen, Ditonto, & Roe, 2019)

- ❖ The article (published in [PLOS ONE](#)) cites experimental research showing that **gender bias accounts for up to a 0.5-point negative effect for women faculty** (based on a five-point response scale)
- ❖ Experimental research by Peterson, Biederman, *et al.* (2019) investigated the impact of limiting the problem of biases in SET by *“cuing students to be aware of their biases, providing motivation to not rely on them, and suggesting alternatives to their stereotypes.”*
- ❖ Among other questionnaire items, each student involved in the study was asked the following questions about their **instructor**, on a five-point scale:
 - Your overall rating of this instructor is?
 - What is your overall rating of the instructor’s teaching effectiveness?
 - And your overall rating of this course is?

Text Added to Course Evaluations*

“Student evaluations of teaching play an important role in the review of faculty. Your opinions influence the review of instructors that takes place every year. <*The University*> recognizes that student evaluations of teaching are often influenced by students’ **unconscious** and **unintentional** biases about the race and gender of the instructor. Women and instructors of color are systematically rated lower in their teaching evaluations than white men, even when there are no actual differences in the instruction or in what students have learned.

As you fill out the course evaluation please keep this in mind and make an effort to resist stereotypes about professors. Focus on your opinions about the content of the course (the assignments, the textbook, the in-class material) and not unrelated matters (the instructor’s appearance).”

*Text adopted from research paper by Peterson, Biederman, Andersen, Ditonto, & Roe (2019, May 15) (<https://doi.org/10.1371/journal.pone.0216241>)

Gender Bias Research Study Finding

by Peterson, Biederman, *et al.* (2019)

When students were reminded to be aware of bias, their **evaluations of female instructors** were:

0.41 points higher as an overall evaluation

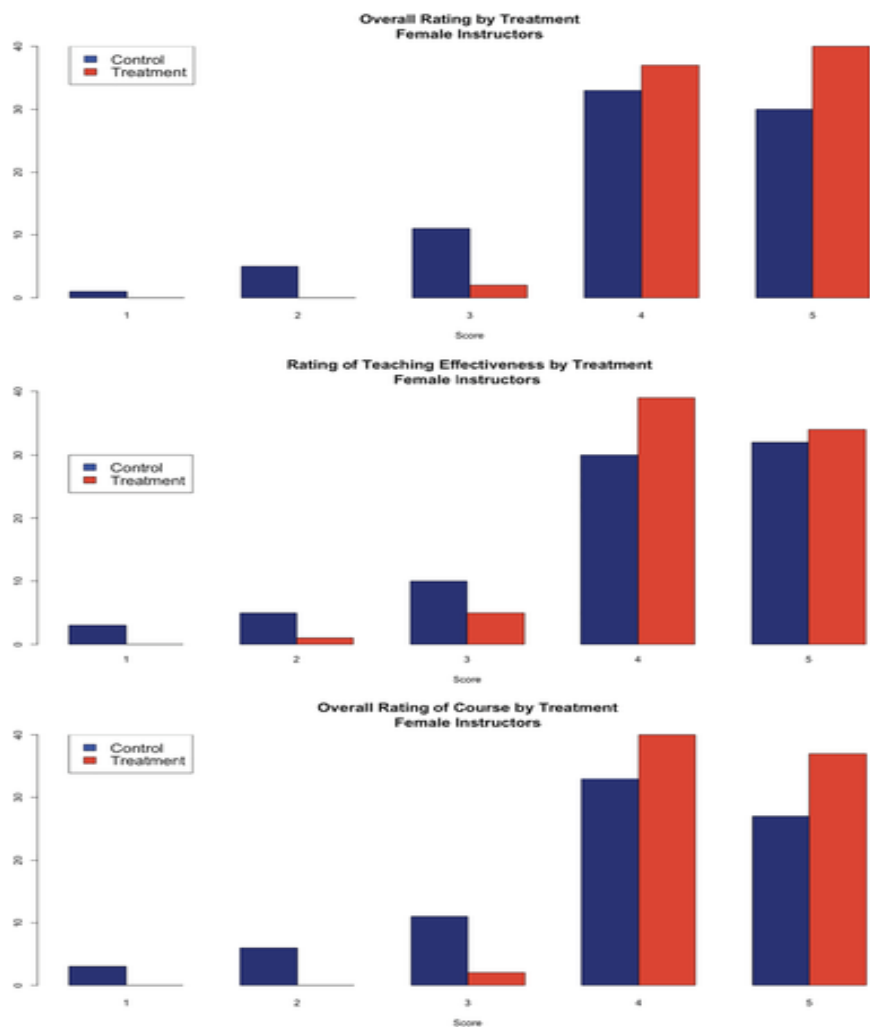

0.30 points higher for teaching effectiveness

0.51 points higher for the overall course evaluation

A Note of Caution: The authors are somewhat **uncertain about the broad applicability** of the study results. ... Hence, **further research is needed.**

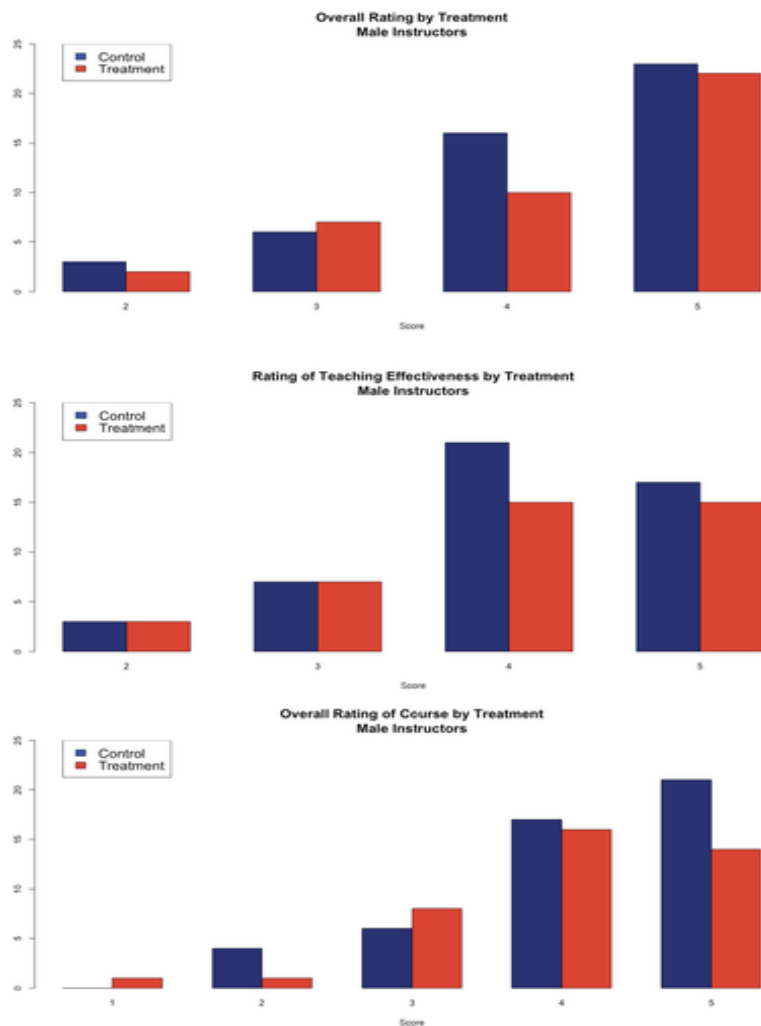

Fig 1. Analysis of student evaluations of teaching by experimental condition (female faculty)*.

- A. Student's **overall rating** of the **instructor**. Higher values are more positive ratings.
- B. Student's rating of the **instructor's teaching effectiveness**. Higher values are more positive ratings.
- C. Student's **overall rating** of the **course**. Higher values are more positive ratings.
- For each panel, the **left (blue) bar** are the students in the **control** condition and the **right (red) bar** are students in the **treatment** condition.

Potential Strategies to Mitigate Bias (How to Use Student Evaluations Wisely)

- Design survey instruments that measure concrete behaviors.
 - **Specify a time frame:**
“This instructor returned graded assignments within two weeks.”
 - **Prompt more reflective, rational input; Encourage students to reflect on particular interactions with their instructor that inform their assessment:**
“This instructor was always in their office during their office hours”.
- **Write better (effective) questions** or questionnaire items.
 - Structure course assessments to help students avoid their own biases (e.g., by being thoughtful about what questions instructors ask students on course assessments, and how those questions are worded.
 - ✓ **Watch out** for global agreement statements such as
“Overall, this person is an effective teacher.”

Potential Strategies to Mitigate Bias

(How to Use Student Evaluations Wisely) (continued)

- Use multiple measures involving multiple data sources to assess teaching more holistically.
 - ensure that student ratings are not the only source of evidence used to assess instructional effectiveness
- Consider using alternative methods of evaluating teaching (e.g., solicit feedback from outside observers / peer evaluations; observe faculty members teach; review an instructor's course materials; reflective statement / read faculty self-evaluations; mid-term course evaluations; focus groups / small group feedback)
- Offer mentoring of faculty to raise awareness (re: bias in SET)
- Contextualize student ratings data
- Allow faculty to have a voice in the course evaluation process

Suggested Options for Using Course Evaluations Effectively

- ❖ Use questionnaire items that are more **specific** such as questions about whether a student feels that *learning objectives have been accomplished*, or other specific items about:
 - **self-efficacy** (Did the student feel capable of succeeding?)
 - **teaching methods** the student observed, or
 - the student's **motivation** to take the course.

Suggested Options for Using Course Evaluations Effectively (continued)

- ❖ Consider using questionnaire items that take some of the onus of student learning off the instructor and **make it clear it is a shared responsibility between students and instructors**
 - For instance, the University of Southern California (USC) revised its course evaluation instruments to improve the specificity of the questions to focus on the following elements:
 - **Examine whether the course objective were explained,**
 - **Assignments reflected the material covered, and**
 - **Instructor(s) sufficiently explained difficult concepts, methods, and subject matter.**

Suggested Options for Using Course Evaluations Effectively (continued)

- ❖ Consider using an approach that employs questionnaire items that **prompt more-thoughtful feedback that evaluates teaching across several categories** that might include:
 - **Teaching Effectiveness** (comprising **multiple measures** ...; and peer-reviewed measures that might include teaching reflection statements; syllabus/course materials review; review of assignments and grading; classroom or peer observation, etc.
 - **Evidence of teaching development**
 - **Inclusive teaching and learning practices**
 - **Student engagement** (place greater emphasis on student engagement and the shared responsibility between instructor and student)

Making Course Evaluations Effective

[Source: Felder (1993)]

- ❖ **Constructing, administering, & interpreting evaluations:**
 - **Collect overall course-end ratings of instruction.**
 - ✓ Note: Clearly define the numbers on the response scale
 - ✓ Example: “Rate the instruction you received in this course on a scale from 1 to 5, with 5 being the highest response.”
 - **Collect ratings of individual aspects of instruction.**
 - **Collect evaluations midway through a course** rather than waiting until the end. (*formative evaluation* purpose)
 - Use **multiple methods to collect student feedback**
 - (e.g., from small groups of students; focus groups; interview student representatives)
 - **Use a variety of sources of feedback**
 - Have faculty colleagues observe your teaching and provide feedback.
 - Video record one of your classes and review the recording
 - **Work with an instructional consultant** to interpret student feedback and plan teaching improvement strategies

Formative Uses of Student Ratings

- **Formative** purposes: Useful feedback for *faculty development* and *enhancement of instruction*
 - ✓ For instance, student feedback can lead faculty to revise teaching methods, refine their courses, change textbooks, revise assignments, or make other changes to provide students with better learning experiences)
 - ✓ Research suggests that students are most qualified sources to report on the extent to which the learning experience was productive, informative, satisfying, or worthwhile.

Formative Uses of Student Ratings (Cont'd)

- Provide useful information on students' perceptions of their engagement, learning outcomes, instructor's behavior, and course activities.
- **Identify teaching strengths and weaknesses**, as perceived by students.
- Play a positive role in **improving the climate of teaching and learning** at a college/university.
- Asking for student feedback regularly sends a clear message that **teaching effectiveness matters...**

Beneficial Ideas on How Instructors Might Improve their Courses

- Reflecting on goals for the course
- Reflecting on teaching methods
- Considering one's strengths & weaknesses as a teacher
- Targeting key areas that need improvement
- Identifying strategies for change (e.g., clarifying points or chunking content)

Ref.: Using Student Evaluations to Improve Teaching. *Speaking of Teaching*. (Stanford University Newsletter on Teaching), Fall 1997, 9(1).

Additional Tips for Using Student Ratings to Enhance Effective Instruction

- Look for **trends or patterns** in the data
- **Focus on key aspects** of your course evaluations
- **Don't give undue weight to open-ended comments** from respondents
- Take into account **course characteristics**

Summative Uses of Student Ratings

- **Summative** (high-stakes) purposes: Student ratings are one source of data about teaching effectiveness for specific uses, such as:
 - Program review, and/or for meeting accreditation data requirements.
 - Assessment of student learning outcomes (assuming the instruments in use are designed appropriately and have good technical properties)

Summative Uses of Student Ratings

(continued)

- **Make appropriate decisions** about course and program level modifications
- **Evaluate strengths and weaknesses** of various instructional delivery modes, including the intersection of content and mode of delivery
- **Measure program level** and general education learning outcomes
- **Evaluate and address concerns** for preparatory course (e.g., the first course in a required sequence of courses)
- Meet **accreditation** standards and data requirements
